

NOTICE

Camera Drivers Compatibility Requirements

For Vicon cameras to work correctly with ViconNet, they must have the appropriate drivers installed.

When working with ViconNet versions 5.6d – 6.6, the current driver is 934. If using ViconNet version 6.6SP1, the correct version driver is 935-A, which is installed after the ViconNet SP1 software.

Note

This update only applies to the specific drivers currently supported by the ViconNet version on the system. For example, ViconNet version 5.6d does not support ONVIF; updating the drivers on a 5.6d system will NOT result in supporting ONVIF.

The most current camera drivers are posted on Vicon's website. Select the Support tab and then select Technical Support/Software Downloads/ViconNet Software or use the link <http://www.vicon-security.com/support-technical-support-viconnet-software-downloads.htm>

Note

The V920D camera series requires a minimum of ViconNet version 6.6SP1 and drivers 935-A
