## IPCConfig Device Config Manager Utility

### General Description

Vicon engineering has released updated version V1.6.1.201903281105 of the IPCConfig camera discovery utility.

The updated versions and relevant camera models as listed below:

Utility	Older Version	Newest Version
IPCConfig utility for V94x series/SN230 camera	V1.6.1.201808311000	V1.6.1.201903281105

### Vicon Production

The latest firmware and discovery tools are available on Vicon's web site. A link is provided in the installation section of this document.

This is not a mandatory update. However, updating to the latest version is good practice to take advantage of new features, fixes and greater stability.

### Corrected Issues

#### Gateway setting

IPCConfig is modified to allow a gateway IP setting of 0.0.0.0.

#### DHCP status

A correction was made in the prompt that appears when changing the DHCP status.

#### HTTPS

Option was added to work with HTTPS, as opposed to plain HTTP.

**Note:**

This new version of IPCConfig must be used with camera firmware V4.00.xx-201811231704 or later. Cameras with an older firmware can be upgraded using this new version of IPCConfig, but camera network configuration should not be performed thru IPCConfig on cameras with older firmware. It is recommended to upgrade the camera firmware first.

## Installing the Updated Firmware

Download the utility from Vicon's website:

<http://www.vicon-security.com/software-downloads-library/vicon-camera-software/>

Unzip the file and run the SW installer IPCConfig\_VICON\_V1.6.1.201903281105.exe, following the instructions:

Click "Finish" to exit.

An icon named "IPCConfig" will appear on the desktop and in the Program sub-menu "IPCConfig" of the start menu.
